Aligner.

Have  
straighter teeth  
in only a  
matter of weeks  
without  
braces

*An exclusive appliance from*

**Great Lakes**  
ORTHODONTICS, LTD.  
*An Employee Owned Company*

*As time goes by, your teeth tend to shift. This movement often causes front teeth to become crowded or rotated. Now, with the patented Inman Aligner appliance, you can have the straight smile you want—quickly and efficiently. And you can get these results without braces.*

## **How does the Inman Aligner work?**

*The Inman Aligner uses lingual (tongue side) spring action to create a piston-like movement, and a labial component (front tooth surface) that reverses the same action. These components work together to align teeth.*

## **Can the Inman Aligner correct all crowded teeth?**

*No. The Inman Aligner is specifically designed to treat the six upper or lower front teeth. Your doctor will evaluate your particular situation and recommend treatment options.*

## **How long will it take?**

*Most patients can be treated in only 4 to 16 weeks.*

## **Is the Inman Aligner comfortable?**

*Yes. It will take about one week to get used to wearing the Inman Aligner. It may cause you to salivate more than usual for 24 to 48 hours, and could minimally affect your speech for 7 to 10 days. The appliance is also easy to insert and remove.*

## **How long each day should I wear the Inman Aligner?**

*The longer the better. Recommended wear time is at least 16 to 20 hours a day. You do, however, have the option of not wearing the appliance during special occasions.*

**Ask  
your doctor  
today if the  
Inman Aligner  
will work  
for you.**
