

# NEW! From Great Lakes

## Alginate Syringe

100-055

- Easy cleaning between each impression-taking procedure
- Nozzle design allows easier reach to difficult access areas
- Usable for all impression alginates in the LASCOD SpA range
- Materials can be sterilized at 134° in an autoclave

- Nozzle outlet dispenses correct amounts of alginate
- High-grade materials guarantee durability
- Does not trigger a gagging reaction
- Ergonomically designed to fit the palm of the hand

### Personal Krono Liquid Retardant

*Designed to increase the working time of Kromopan*

- Extremely useful when alginate is affected by significant changes in environment or water temperature
- When mixing Kromopan, each drop added to the water increases working time by 20 seconds
- Ideal when taking impressions using a syringe
- Will not affect alginate characteristics
- Will not affect in-mouth setting time
- Odorless and tasteless

100-054 30ml
