The NOLA DRY FIELD SYSTEM

Completey eliminates saliva and fully exposes dental arches.

Fully Exposes Dental Arches
The System completely isolates the dental arches to create an unobstructed field. Full access to both arches promotes efficient use of chair time and effective results.

Enhances Patient Comfort
The self-adjusting, open design of the tongue guard allows the patient to continue swallowing and promotes relaxation. The smooth surface of the appliance prevents soft tissue irritation.

Easy to Use
The System is easy to assemble and can be inserted and used by a single operator. Available in large and small sizes. All parts are autoclavable but can be cold sterilized.

NOLA Warm Air Dryer
The Great Lakes NOLA Warm Air Dryer removes excess tooth surface moisture, eliminating the need for potentially contaminated compressed air. This dryer precisely directs air at a reduced heat and flow shown to be clinically effective. Compact and lightweight.

The Dri-Angle®
Effectively restricts saliva flow to maintain a dry field

- TONGUE GUARD
  Holds the tongue in place and allows the patient to continue swallowing.

- ADJUSTABLE CHEEK RETRACTORS
  Keeps the cheeks back and fully exposes both dental arches.

- CENTRAL SUCTION
  “Y” connector with low-volume adapter (high-volume also available)

- 360 degree rotation lingual elbow (disposable)
- Tapered nozzle (autoclavable)
- 110 volt, 60 watt
- 220 volt transformer available
- 1 year warranty

Edge-Ease® Comfort Cushions
Ideal for use with the Dry Field System. The soft foam cushion can be applied to the sublingual area of the tongue guard. This will provide additional comfort for the mucosa and mandibular tori lingual to the lower anteriors during Dry Field System use.
