Computerized Precision Bracket Placement Solution
The most valuable resource used in the office is your time. It is generally accepted that accurate bracket positioning is a key factor for guaranteeing an effective and time-efficient treatment. Unfortunately, most brackets are still bonded in a direct, artisan-like fashion.

Now there’s eXceed…a patented suite of precision, computer-aided, bracket placement services. This exclusive technology determines the exact digital placement coordinates for each bracket. Then, through the use of cutting-edge 3D model printing technology, bonding trays are precisely manufactured for fit and bracket position accuracy.

eXceed offers two different methods to calculate ideal bracket positioning.
- **eXceed Rx** – Position of appliances is determined using the pre-treatment occlusion.
- **eXceed Tx** – Position of appliances is optimized with the help of a virtual, post-treatment target simulation. Bracket and tooth position are in your control.

Four Easy Steps

1. **Upload patient’s records** (3D models, images, X-rays) to “My eXceed”.
2. An eXceed bracket placement plan will become available for review and approval.
3. Great Lakes will manufacture and ship the bonding trays to the office.
4. Use the eXceed trays chair-side for quick and efficient bonding.

eXceed provides unprecedented accuracy.
Powerful software scientifically calculates the ideal position of the brackets on the teeth:
- Adjustments to brackets and archwires are minimized or eliminated.

eXceed is fast and efficient.
- eXceed significantly reduces time spent placing brackets.
- eXceed minimizes chair time.

eXceed gives you ultimate control.
- Prior to tray fabrication, the file will be available for your review and approval. The user-friendly software will allow you to adjust the bracket placement, giving you ultimate control.
- We can use your brackets or you can select ours. eXceed is compatible with most popular straight-wire bracket systems.

Getting started with eXceed is easy.
